INVESTMENT PRODUCTS:

Disclosures

Risk Factors:

An investment in shares of common stock of Brookfield Real Estate Income Trust Inc. (“Brookfield REIT”) involves a high degree of risk. These securities should only be purchased if you can afford to lose your complete investment. Please read the prospectus for a description of the material risks associated with an investment in Brookfield REIT. These risks include but are not limited to the following:

Brookfield REIT has a limited operating history, and its operating history should not be relied upon due to the changes to its business resulting from the adviser transition, including the engagement of Brookfield REIT Adviser LLC (the “Adviser”) and Brookfield Oaktree Wealth Solutions LLC and the changes to Brookfield REIT’s board of directors, executive officers and investment portfolio. There is no assurance that Brookfield REIT will be able to successfully achieve its investment objectives.

Brookfield REIT has only made limited investments to date and you will not have the opportunity to evaluate its future investments before Brookfield REIT makes them.

Since there is no public trading market for shares of Brookfield REIT’s common stock, repurchase of shares by it will likely be the only way to dispose of your shares. Brookfield REIT’s share repurchase plan will provide stockholders with the opportunity to request that it repurchase their shares on a monthly basis, but Brookfield REIT is not obligated to repurchase any shares and may choose to repurchase only some, or even none, of the shares that have been requested to be repurchased in any particular month in its discretion. In addition, repurchases will be subject to available liquidity and other significant restrictions. Further, Brookfield REIT’s board of directors may modify or suspend the share repurchase plan if it deems such action to be in our best interest and the best interest of stockholders. As a result, the shares should be considered as having only limited liquidity and at times may be illiquid.

Brookfield REIT cannot guarantee that it will make distributions, and if it does, it may fund such distributions from sources other than cash flow from operations, and there are no limits on the amounts Brookfield REIT may pay from such sources. Brookfield REIT believes that the likelihood that it pays distributions from sources other than cash flow from operations, will be higher in the early stages of the offering.

The purchase and repurchase price for shares of Brookfield REIT common stock will generally be based on its prior month’s net asset value (NAV)

(subject to material changes as described in the prospectus) and will not be based on any public trading market. While there will be independent annual appraisals of Brookfield REIT’s properties, the appraisal of properties is inherently subjective, and its NAV may not accurately reflect the actual price at which its assets could be liquidated on any given day.

Brookfield REIT has no employees and is dependent on the Adviser to conduct its operations. The Adviser will face conflicts of interest as a result of, among other things, the allocation of investment opportunities among Brookfield REIT and other Brookfield funds and accounts, the allocation of time of its investment professionals and the substantial fees that Brookfield REIT will pay to the Adviser.

This is a “best efforts” offering. If Brookfield REIT is not able to raise a substantial amount of capital in the near term, its ability to achieve its investment objectives could be adversely affected.

Principal and interest payments on any borrowings will reduce the amount of funds available for distribution or investment in additional real estate assets. Borrowing also increases the risk of loss and exposure to negative economic effects.

There are limits on the ownership and transferability of Brookfield REIT’s shares.

If Brookfield REIT fails to maintain its qualification as a REIT and no relief provisions apply, its NAV and cash available for distribution to stockholders could materially decrease as a result of being subject to corporate income tax.

Investing in commercial real estate assets involves certain risks, including but not limited to Brookfield REIT’s tenants’ inability to pay rent; increases in interest rates and lack of availability of financing; tenant turnover and vacancies; and changes in supply of or demand for similar properties in a given market.

Brookfield REIT’s operating results will be affected by global and national economic and market conditions generally and by the local economic conditions where its properties are located, including changes with respect to rising vacancy rates or decreasing market rental rates; fluctuations in the average occupancy; inability to lease space on favorable terms; bankruptcies, financial difficulties or lease defaults by its tenants; and changes in government rules, regulations and policies, such as property taxes, zoning laws, limitations on rental rates, and compliance costs with

respect to environmental and other laws.

The novel coronavirus (“COVID-19”) may have an adverse impact on Brookfield REIT’s NAV, results of operations, cash flows and fundraising, ability to source new investments, obtain financing, pay distributions to stockholders and satisfy repurchase requests, among other factors.

Diversification

Over the past 20 years, private real estate has exhibited effective diversification to stocks and bonds, as well as public real estate

Asset Class Correlation

20-Year Annualized Returns Through 2022

	U.S. Equities	International Equities	Public Real Estate	U.S. Fixed Income	Private U.S. Real Estate
U.S. Equities	1.00	0.89	0.76	0.02	0.09
International Equities		1.00	0.68	0.06	0.02
Public Real Estate			1.00	0.18	0.16
U.S. Fixed Income				1.00	(0.24)
Private U.S. Real Estate					1.00

Correlation is a statistic that measures the degree to which two investments move in relation to each other.

A correlation coefficient of 1 indicates a perfect positive correlation, meaning that they move in the same direction by the same amount.

A coefficient of -1 indicates a perfect negative correlation, meaning that they have historically moved in the opposite direction.

Therefore, the lower the number, the better the diversification.

Past performance does not guarantee future results. Diversification does not ensure a profit or protect against loss in a declining market.

Tax Advantages

Tax benefits unique to direct real estate ownership can reduce investors' effective tax rate and increase after-tax yields—particularly in scenarios where return of capital is high

- For tax purposes, distributions from non-traded REITs may be classified as “return of capital.”
- Distributions are paid out of available cash flow, which reflects non-cash items such as depreciation, instead of net income.
- Return of capital distributions are tax-deferred and reduce the shareholder’s cost basis.
- If the investment is sold at a gain after more than a year, it would be taxed at the long-term capital gains rate.

Historical analysis does not guarantee future results. As of December 31, 2022. For illustrative purposes only and assumes \$100,000 investment with 5% (\$5,000) annualized distribution taxed at highest federal tax bracket. The example does not include state taxes. An investor could be subject to state income tax in their state of residence, which would lower the after-tax yield received by the investor.
